

Sub A4

The tool of the invention, implemented on a microcomputer (23), essentially comprises a spreadsheet (24) associated with a library of graphical symbols (25) and a compiler (29). The compiled code is transmitted via the operating system (32) of the microcomputer to its output port (33) to which are connected the programmable memories (34) of the components (35) which must be controlled by the commands generated on the basis of graphs produced on the spreadsheet.
